

Outlook Email Assistant Release Notes

Version 1.1.0

This release turns the extension into a more useful Outlook Web companion with a clearer dashboard, better organization, and faster ways to spot what matters.

What's New

- Added a real Outlook Web sidebar instead of replacing the entire page.
- Added a Priority Dashboard that highlights important emails, urgent emails, and extracted tasks in one place.
- Added an Important + Urgent view to help users focus on high-priority messages first.
- Added a Today / Week / Later task view generated from email content.
- Added a Single Email Summary view with key points, deadlines, and suggested next actions.
- Added a Group View for organizing messages by classes, jobs and career emails, and promotions.
- Added popup controls to scan the inbox, show the assistant, and hide the assistant.

Smarter Email Help

- Added lightweight detection for urgent and important messages based on deadline and action language.
- Added simple deadline detection for phrases like today, tomorrow, weekdays, times, and next week.
- Added task extraction for common action phrases like register, review, apply, prepare, email, and submit.

Design Updates

- Updated the extension experience to better match the project proposal and Figma direction.
- Reworked the popup to feel cleaner and more product-focused.
- Replaced the old full-page mock layout with a fixed assistant sidebar that fits alongside Outlook Web.

Fixes and Improvements

- Fixed popup-to-page messaging so the controls now trigger real actions in Outlook Web.

- Fixed the stylesheet reference to match the actual file name casing.
- Removed the old behavior that cleared the Outlook page and replaced it entirely.
- Added local state persistence for sidebar visibility, selected views, and the selected email.

Known Limitations

- Inbox scanning is still based on Outlook Web page structure, so some layouts may need further tuning.
- Summaries and task extraction are rule-based in this release and do not yet use a connected AI backend.
- Thank you for trying Outlook Email Assistant. This release is focused on making email easier to scan, organize, and act on without losing time digging through the inbox.
